Bondoc, Orville L.

Animal breeding: principles and practice in the
Philippine context / Orville L. Bondoc.—Quezon City: The
University of the Philippines Press, c2008.

p. ; cm.

1. Animal breeding—Philippines. 2. Breeding—
Philippines. 3. Animal genetics—Techniques. I. Title.

SF105 636.082 2009 P091000060

ISBN 978-971-542-589-6

Book Design by Zenaida N. Ebalan

Printed in the Philippines by EC-tec Commercial

Contents

Foreword	xxi
Acknowledgements	xxiii
Chapter 1: Introduction	
<i>Summary</i>	1
A. Definition of Animal Breeding.....	1
B. Goals of Animal Breeding.....	4
C. Short History of Animal Breeding	5
D. Overview of Animal Breeding Industries	6
1. Value of improvement	9
2. Role of the government	10
E. Research in Animal Breeding.....	10
Chapter 2: Genetic Basis of Animal Differences	
<i>Summary</i>	13
A. Transmission of Genetic Materials	14
1. Gametogenesis and fertilization	14
2. Discovery of the chromosomes	15
a. Chromosomes of domestic species	16
b. Chromosomes and sex determination	16
3. Nature and functions of genes	16
a. The gene	16
b. Functions of the gene	18

B. Principles of Mendelian Genetics	19
1. Law of segregation	20
2. Law of independent assortment.....	21
3. Probability and tests of genetic hypothesis	21
C. Gene Effects	21
1. Phenotypic expression of genes	21
2. Types of gene action	22
a. Additive gene action	24
b. Non-additive gene action.....	24
i. Dominance	
ii. Overdominance	
iii. Epistasis or interaction	
3. Variations in phenotypic ratios.....	27
a. Linkage (autosomal linkage)	27
b. Sex-related traits	29
i. Sex-linked traits	
ii. Sex-influenced traits	
iii. Sex-limited traits	
c. Multiple alleles	32
d. Pleiotropy	33
e. Variable expressivity	34
f. Incomplete penetrance	34
g. Extranuclear (cytoplasmic) inheritance	34
h. Maternal influence	35

Chapter 3: Genetics of Animal Populations

<i>Summary</i>	36
A. Genes in Populations	37
B. Genetic Specification of a Population	37
1. Gene frequency	38
2. Genotypic frequency	38

3. Computation of gene and genotypic frequencies	38
a. When no dominance exists.....	38
b. With complete dominance.....	40
c. Other variations	40
C. Population Dynamics	41
1. Static population: Hardy-Weinberg equilibrium	41
2. Dynamic population: Changes in gene frequency ...	43
a. Nonrandom mating.....	43
b. Migration.....	44
c. Mutation.....	45
d. Selection	46
e. Small population size	47
D. Applications of Population Genetics to Quantitative Traits.....	48
 Chapter 4: Quantitative Effects of Genes in Populations	
Summary	50
A. Values and Means	51
1. Quantitative traits of possible economic importance	51
2. Genetic and environmental effects	52
3. Population mean.....	53
4. Breeding values.....	54
5. Dominance and interaction deviations.....	55
B. Variance	55
1. Genotypic and environmental variance.....	55
2. Genetic components of variance	56
a. Additive variance (V_A)	57
i. Based on records of a parent and its offspring	
ii. Based on sib records	
b. Dominance variance (V_D)	58

c.	Interaction variance (V_p)	58
3.	Environmental components of variance	59
C.	Resemblance Between Relatives	59
1.	Phenotypic resemblance	59
2.	Genetic covariance	60
a.	Offspring and parent	60
i.	Offspring and one parent	
ii.	Offspring and mid-parent	
b.	Half sibs	62
c.	Full sibs	62
d.	Twins	63
e.	Epistatic interaction	63
3.	Environmental covariance	63
D.	Heritability and Repeatability	64
1.	Concept of heritability	64
2.	Estimation of heritability	65
a.	Offspring-parent regression	65
b.	Sib analysis	66
c.	Intra-sire regression of offspring on dam	67
3.	Reliability of heritability estimates	67
4.	Repeatability	68
E.	Correlations and Interactions	69
1.	Genetic and environmental correlations	69
a.	Causes of genetic correlation	71
b.	Estimation of genetic correlation	71
2.	Genotype by environment interactions	71
a.	Definition and examples	71
b.	Effects on selection	73
F.	Statistical Methods to Estimate Genetic Parameters	73

Chapter 5: Selection in Farm Animals

<i>Summary</i>	75
A. Principles of Selection	76
1. Natural and artificial selection	76
2. Genetic effects of selection	76
B. Methods of Selection	78
1. Individual selection	79
2. Use of information from relatives	79
a. Selection on the basis of pedigree	79
b. Selection on the basis of progeny tests	80
c. Selection on the basis of sib information	81
3. Use of measurements on several traits	82
a. Tandem method	82
b. Independent culling levels	82
c. Selection index	83
C. Selection Index Theory	84
1. Genetic and phenotypic variances and covariances	84
2. Economic values	85
D. Evaluating Animals by BLUP	87
1. BLUP animal model	88
2. BLUP versus selection index	90
3. Comparison of BLUP with other methods of predicting breeding values	91
4. Applications to the local livestock industry	92
E. Estimation of Genetic Progress	94
1. Prediction of genetic improvement per year	94
a. Basic formula	94
b. Correlated response	100

c.	Theoretical response possible by current selection methods	101
2.	Measurement of realized genetic improvement ...	101
a.	Methods to monitor genetic improvement	102
b.	Realized genetic improvement in farm animals	103
c.	Long-term effects of selection	103
d.	New developments in statistics and computing	104

Chapter 6: Systems of Mating

	<i>Summary</i>	105
A.	Inbreeding	107
1.	Relationship coefficients	107
a.	Additive relationship	108
b.	Dominance relationship	109
2.	Inbreeding coefficient	110
3.	Rate of inbreeding	111
4.	Change in genotypic frequency and genetic variance due to inbreeding	112
5.	How to measure relationships and inbreeding	113
a.	Tabular method	114
b.	Path coefficient method	120
6.	Consequences of inbreeding	123
a.	Exposure of undesirable recessive gene combinations	123
b.	Inbreeding depression	124
7.	Practical uses of inbreeding	125
a.	Increased prepotency	125
b.	Detection of lethal genes	126

c.	Concentrated use of a genetically superior animal	126
d.	Formation of inbred lines	126
B.	Outbreeding	128
1.	What is heterosis?	128
2.	Genetic bases for heterosis	130
3.	How to estimate heterosis	132
4.	Forms of outbreeding	136
a.	Outcrossing	136
b.	Linecrossing	137
c.	Crossbreeding	138
i.	Two-breed crossing (Single crosses)	
ii.	Backcrossing	
iii.	Three-breed crossing (Three-breed terminal cross)	
iv.	Four-breed terminal cross (Topcrossing)	
v.	Crisscrossing	
vi.	Three-breed rotation	
vii.	Four-breed rotation	
viii.	New breed development	
ix.	Combining inbreeding, crossbreeding, and selection	
d.	Grading up	150
e.	Species hybridization	151

Chapter 7: Biotechnology Applications for Animal Improvement

<i>Summary</i>	153
A. Techniques in Biochemical and Physiological Genetics	154
B. Techniques in Molecular Genetics (Modern Genetic Engineering)	156

1. Identification of individuals or genetic groups and verification of parentage	156
2. Removal or blocking of undesirable genes	158
3. Alteration of structural genes to change product quality	158
4. Evaluation of candidates for selection	158
5. Transfer of genes	159
C. Techniques in Reproduction or Artificial Breeding	160
1. Artificial insemination and related technologies..	161
2. MOET and embryo transfer-based technologies..	162
a. Pre-pubertal and juvenile MOET	163
b. Embryo production in vitro	164
c. Embryo splitting and cloning	164
d. Predetermining the sex of offspring	165
e. Induced twinning	165
f. Chimeras	166
g. Cryopreservation	166

Chapter 8: Animal Breeding Strategies for Livestock and Poultry Genetic Improvement in the Philippines

<i>Summary</i>	167
A. Systematic Approach to the Design of Animal Genetic Improvement Programs	167
1. Future environments (production and marketing systems)	168
2. Breeding objectives and selection criteria	169
3. Testing and selection program	170
a. Data collection	171
b. Animal performance recording	171
c. Prediction and reporting of breeding values..	172
d. Organizing a local selection program	173

e. Importation strategy	174
4. Crossbreeding systems	176
5. Dissemination (dispersal and distribution) of improved breeding stock	177
6. Problems and future prospects	178
B. Carabao (Water Buffalo) Breeding	180
1. Industry profile	180
a. Stock importations	181
b. Philippine Carabao Center (PCC)	181
2. Water buffalo breeds	182
a. Swamp buffaloes	182
b. River buffaloes	183
3. Quantitative traits of economic importance in water buffaloes	187
4. Selection within purebreds	187
5. Crosses between river x swamp buffaloes	190
a. Heterosis estimates	191
b. Karyotype analysis	191
6. Applications of artificial insemination (AI) and embryo transfer (ET) technologies in water buffaloes	192
C. Dairy Cattle Breeding	193
1. Industry profile	193
2. Stock importations and dairy cattle breeds	194
3. Quantitative traits of economic importance in dairy cattle	196
4. Selection programs	198
a. AI progeny testing	198
i. Importance of artificial insemination	
ii. Test of young bulls program	
iii. Sire evaluation	

b.	MOET breeding schemes	200
c.	Open nucleus breeding scheme	201
i.	Foundation selection program	
ii.	Continuation selection program	
d.	Response to selection	203
5.	Crossbreeding of dairy cattle	203
a.	Average genetic difference between <i>Bos</i> <i>taurus</i> and <i>Bos indicus</i>	204
b.	Heterosis estimates	205
c.	Genotype (heterosis) x environment interaction	206
D.	Beef Cattle Breeding	207
1.	Industry profile	207
2.	Stock importations and beef cattle breeds in the Philippines	207
3.	Quantitative traits of economic importance in beef cattle	215
4.	Selection programs	216
a.	Improvement within a breed	217
i.	Performance testing	
ii.	Progeny testing	
iii.	Pedigree testing	
b.	Improvement in a commercial herd	219
i.	Sire selection	
ii.	Selection of female replacements	
iii.	Cow culling	
c.	Local genetic evaluations	221
d.	Response to selection	223
5.	Crossbreeding of beef cattle	223
a.	Upgrading	224

b. Commercial crossbreeding	225
i. Rotational crossbreeding	
ii. Terminal crossbreeding	
6. Applications of reproductive biotechnologies in beef cattle	227
a. Artificial insemination and estrus synchronization.....	227
b. Multiple ovulation and embryo transfer	229
E. Goat Breeding	229
1. Industry profile.....	229
2. Stock importations and goat breeds in the Philippines	230
a. Performance standards for various goat breeds	232
b. Diversity of goat genetic resources	234
i. Blood protein polymorphisms in native goats	
ii. Association between blood protein polymorphisms and mature body weight and external body measurements	
iii. Analysis of albumin and transferrin electrophoretic band patterns in different sib families of goats	
iv. Geographical distribution of goat blood proteins among Anglo Nubian, native goats and their F ₁ crosses	
3. Quantitative traits of economic importance in goats	236
4. Selection program	237
a. The Philippine Goat Breed Registry	238
b. Local genetic evaluations.....	238
c. Response to selection	239

5. Crossbreeding in goats.....	239
a. Upgrading.....	239
i. Mature weight and external body measurements	
ii. Carcass characteristics	
b. Heterosis estimates	241
6. Applications of reproductive biotechnologies in goats	242
a. Artificial insemination	242
b. Multiple ovulation and embryo transfer	243
F. Swine Breeding	244
1. Industry profile.....	244
2. Stock importations	245
3. Swine breeds in the Philippines	246
4. Quantitative traits of economic importance in swine.....	250
5. Selection program	252
a. The pyramid structure	253
b. Home test versus station test	253
c. The National Swine Performance Testing Program (NSPTP)	253
d. Local genetic evaluations.....	254
e. Locally-derived selection indices.....	255
f. Response to selection	256
i. Results of selection experiments	
ii. Recent developments	
iii. Other strategies to improve quality of pork	
6. Crossbreeding of swine	257
a. Crossbreeding systems	258
b. Heterosis estimates	258

7. Applications of reproductive biotechnologies	
in pigs	260
a. Artificial insemination	260
b. Multiple ovulation and embryo transfer	260
G. Poultry (Chicken) Breeding	261
1. Industry profile	261
a. Production of native chickens	261
b. Broiler industry	262
c. Layer industry	262
2. Poultry breeding industry and stock importation	263
3. Chicken breeds in the Philippines	264
a. Philippine native chickens	264
b. Modern chicken breeds	267
4. Broiler breeding	268
a. Quantitative traits of economic importance in broilers	268
b. Broiler improvement program	270
i. Testing and selection program	
ii. Crossbreeding systems	
5. Layer breeding	272
a. Quantitative traits of economic importance in layers	272
b. Layer improvement program	274
i. Multiple-trait selection	
ii. Crossing strains or breeds	
iii. Elimination of poorer lines, strains, and commercial stocks	
H. Duck Breeding	276
1. Industry profile	276

2. Stock importation	277
3. Duck breeds in the Philippines	278
a. Meat-type breeds	278
b. Egg-type breeds.....	279
4. Quantitative traits of economic importance in ducks	280
5. Selection program	281
6. Crossbreeding of ducks.....	283

Chapter 9: Conservation and Use of Domestic Animal Genetic Resources

<i>Summary</i>	284
A. Importance of Biodiversity of Livestock and Poultry Genetic Resources	285
1. Present applications	285
2. Scientific research	287
3. Public sentiment.....	287
4. Future insurance	287
B. Priorities for Conserving Animal Genetic Resources ...	287
C. Kinds of Conservation Schemes	289
1. In situ conservation.....	289
2. Ex situ conservation.....	290
3. Recommended conservation methods.....	292
D. Applied Breeding Schemes for Conservation.....	293
1. Maintaining genetic diversity	296
2. Avoiding/minimizing hazards and genetic loss.....	296
3. Multiplying the conserved stocks	297

Appendices

2.1. Some notes on probability	299
2.2. Test of genetic hypotheses.....	302

4.1. Statistical formulas useful in the study of quantitative genetics	306
4.2. Milestones in quantitative genetics.....	310
4.3. Local applications/practice of quantitative genetics.....	310
4.4. Milestones in statistical methodology	314
4.5. Local applications/practice of statistical methodology	314
5.1. Milestones in selection.....	317
5.2. Local applications/practice of selection.....	318
6.1. Milestones in mating designs	322
6.2. Local applications/practice of mating designs	322

Practice Questions/Problems

Mendelian inheritance	325
Linkage and sex-related traits	328
Laws of probability	331
Chi-square (X^2) test.....	333
Gene and genotypic frequency	334
Effects of selection on gene frequency	335
Values and means	336
Mean, variance, correlation, and regression	337
Estimation of heritability	338
Methods of selection for more than one trait	341
Prediction and measurement of response to selection.....	342
Inbreeding	344
Outbreeding	345
Operations manual of a livestock breeding station/center	348
