

# Ending TB in the Western Pacific Region: a journey toward 2030

Regional Framework to implement End TB Strategy, 2021- 2030

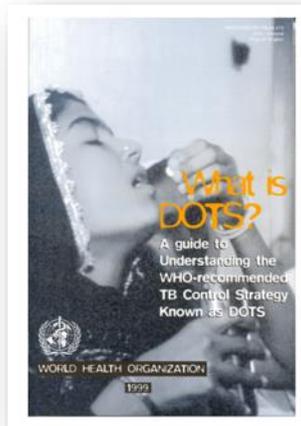

Dr Kalpeshsinh Rahevar

WHO Western Pacific Region

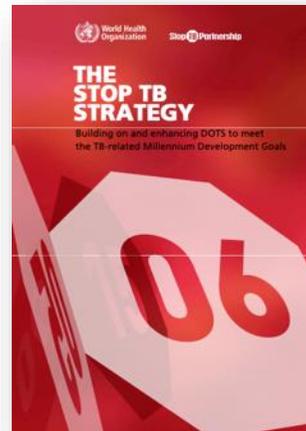

# Evolution: Global Strategy and Regional Framework

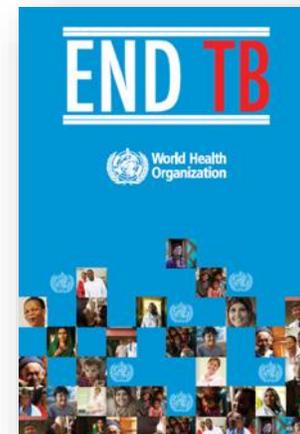

DOTS Strategy

Stop TB Strategy

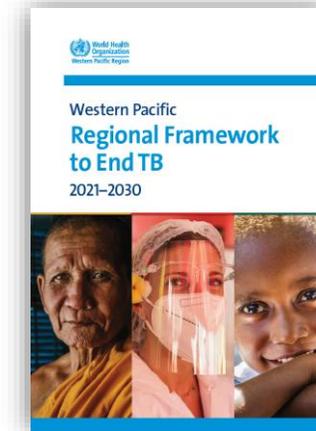

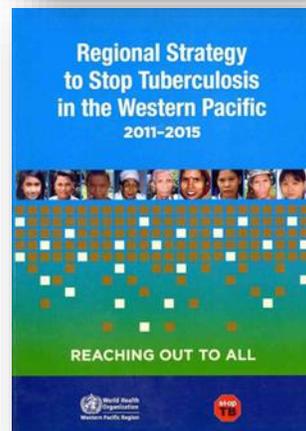

End TB Strategy

Global

Regional

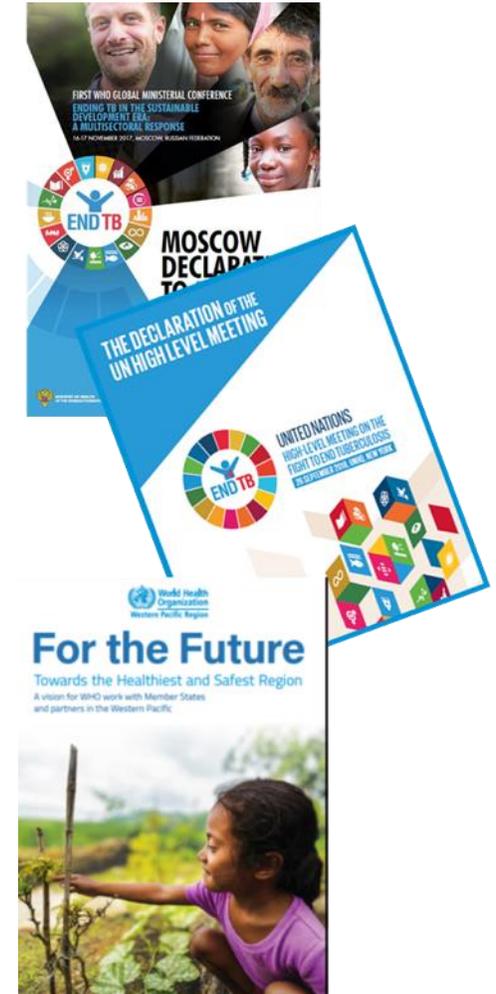

# Introduction to the new Framework

## Why a new Framework?

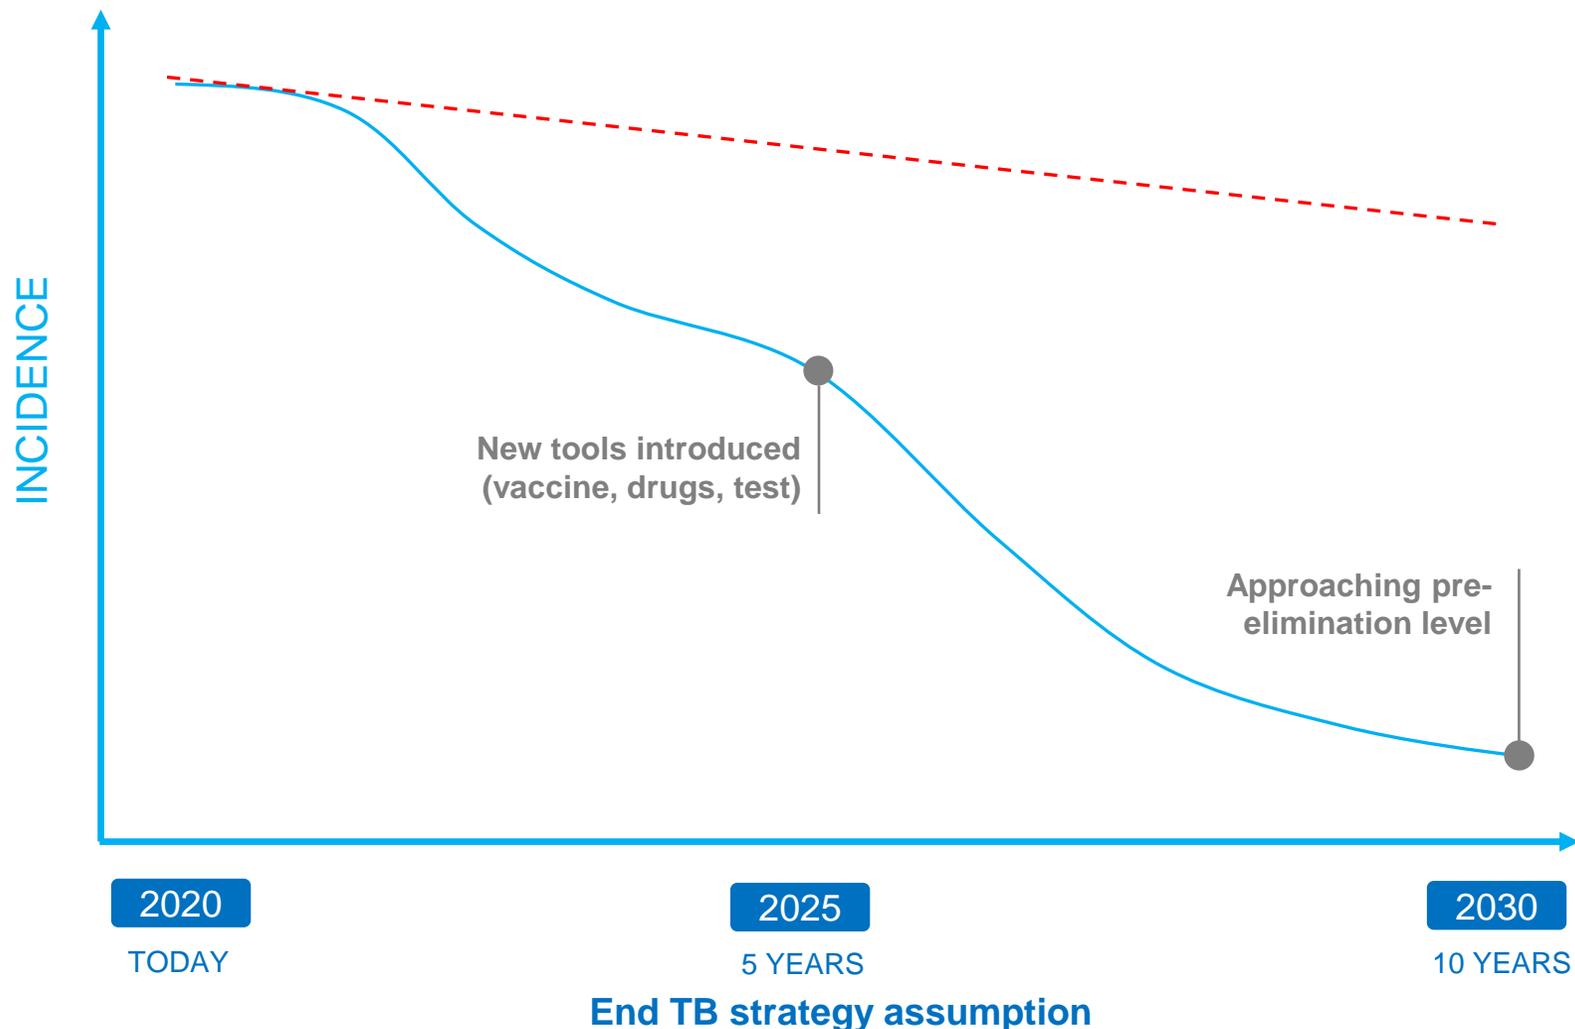

- Slow progress, requiring fresh thinking
- Existing and emerging challenges
- New experiences, tools and guidance available
- Unprecedented political momentum
- WPRO's new vision/ diversity
- Lessons identified from COVID-19

## How is it developed?

- Evaluation
- Studies
- Consultation

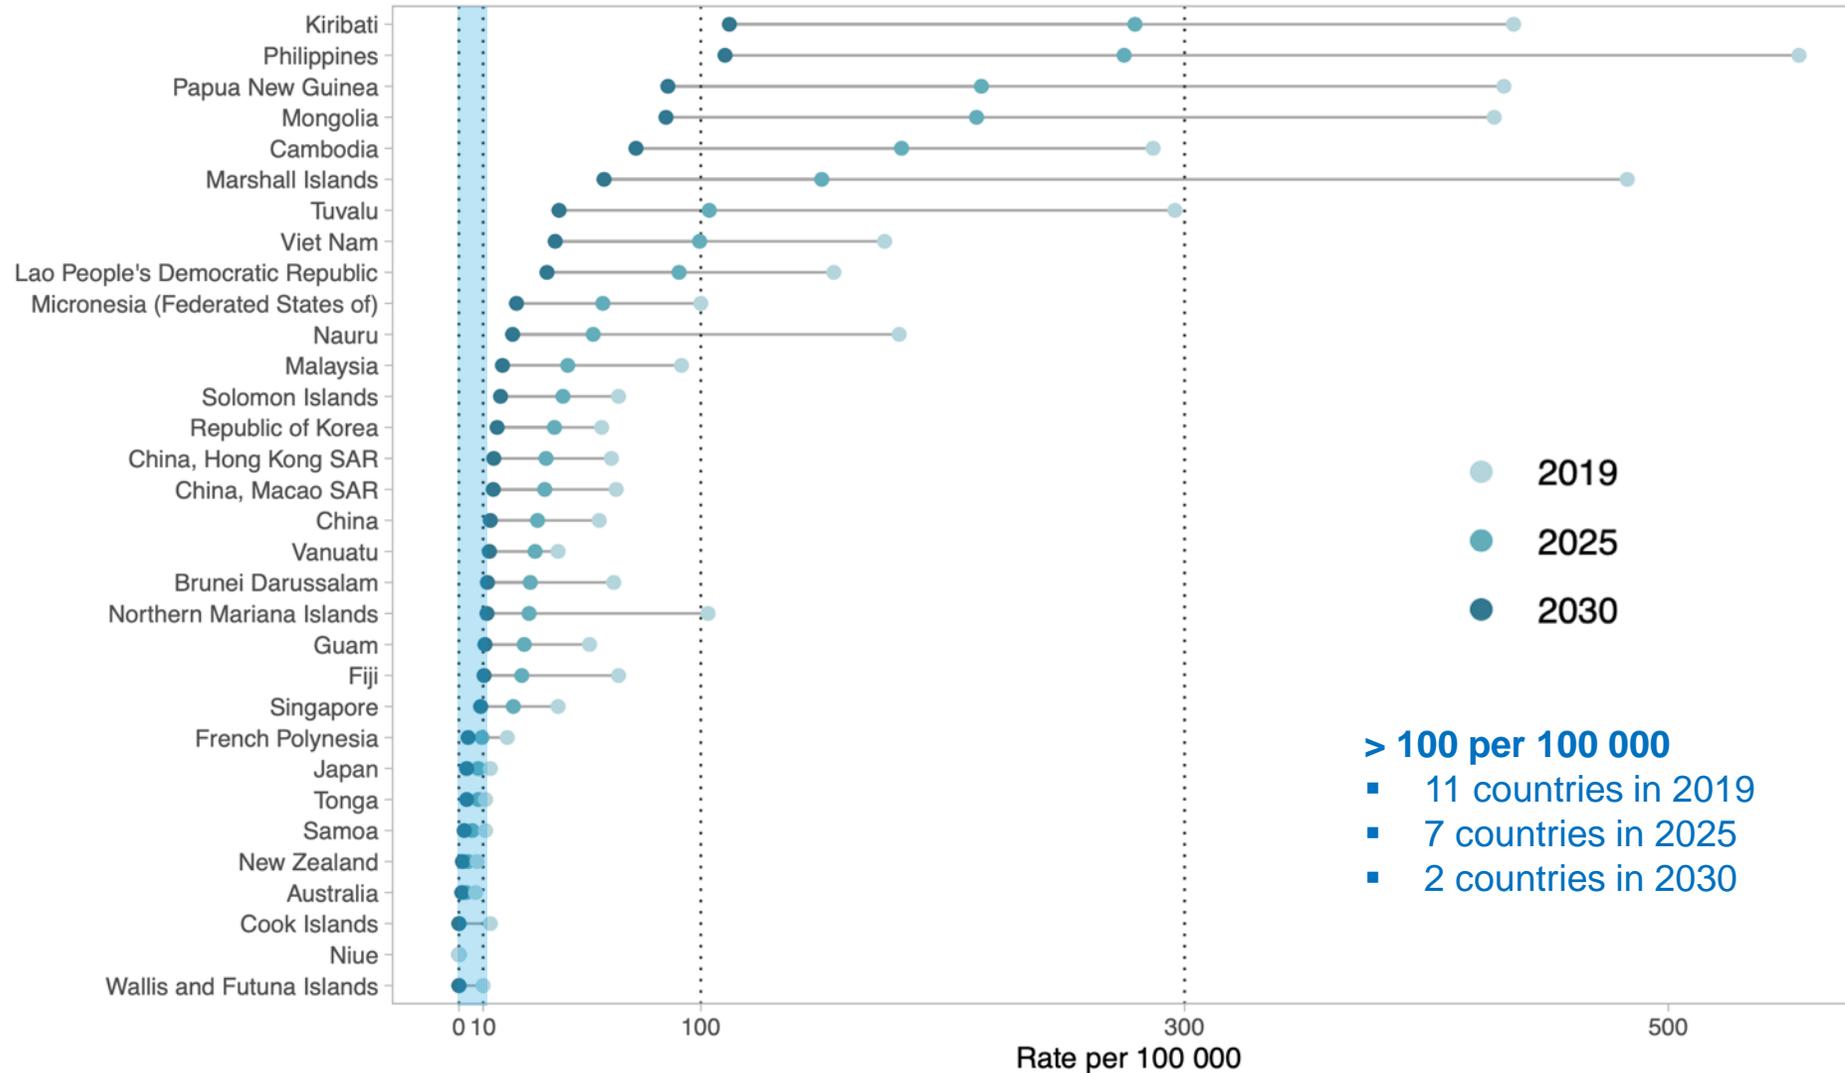

## Future scenario: TB in 2030

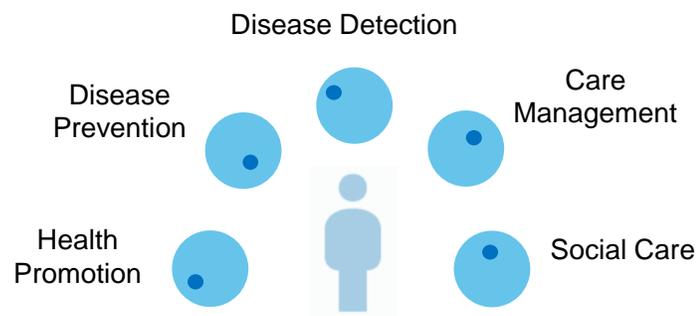

- Social determinants of TB largely addressed
- Universal coverage for TB is mostly ensured
- New tools are effectively introduced
- Incidence and mortality reduced dramatically
- Majority are intermediate and low burden countries
- Concentrated in high-risk groups
- Big proportions are due to reactivation of old infection
- Outbreak response as a norm

# Future scenario: Country specific TB epidemiology

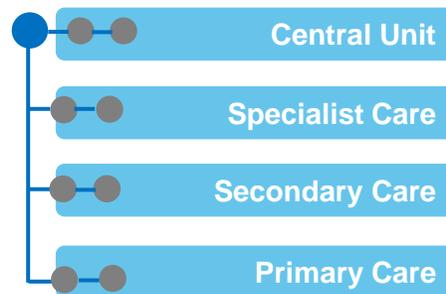

Estimated TB incidence rate in 2019 and target reduction in 2025 and 2030

# Future scenario: System

Personalized care system with precision medicine

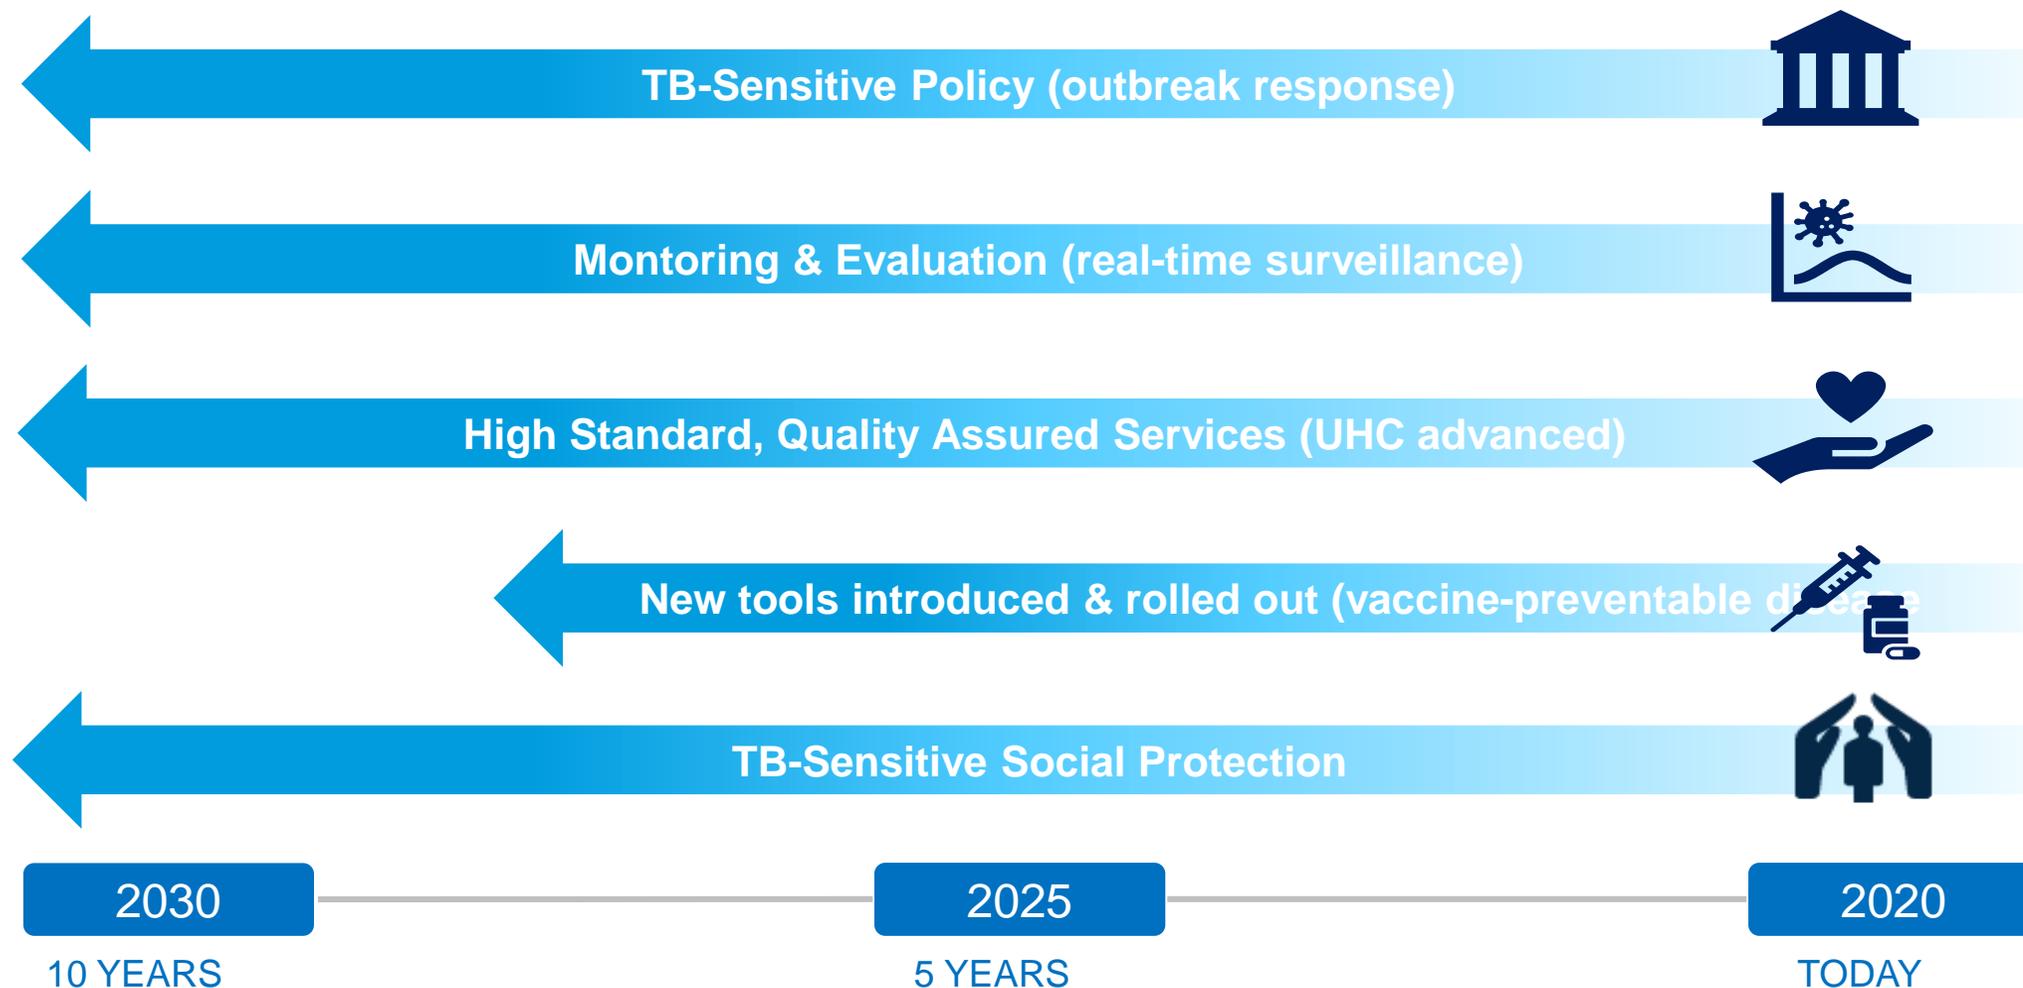

Integrated care system

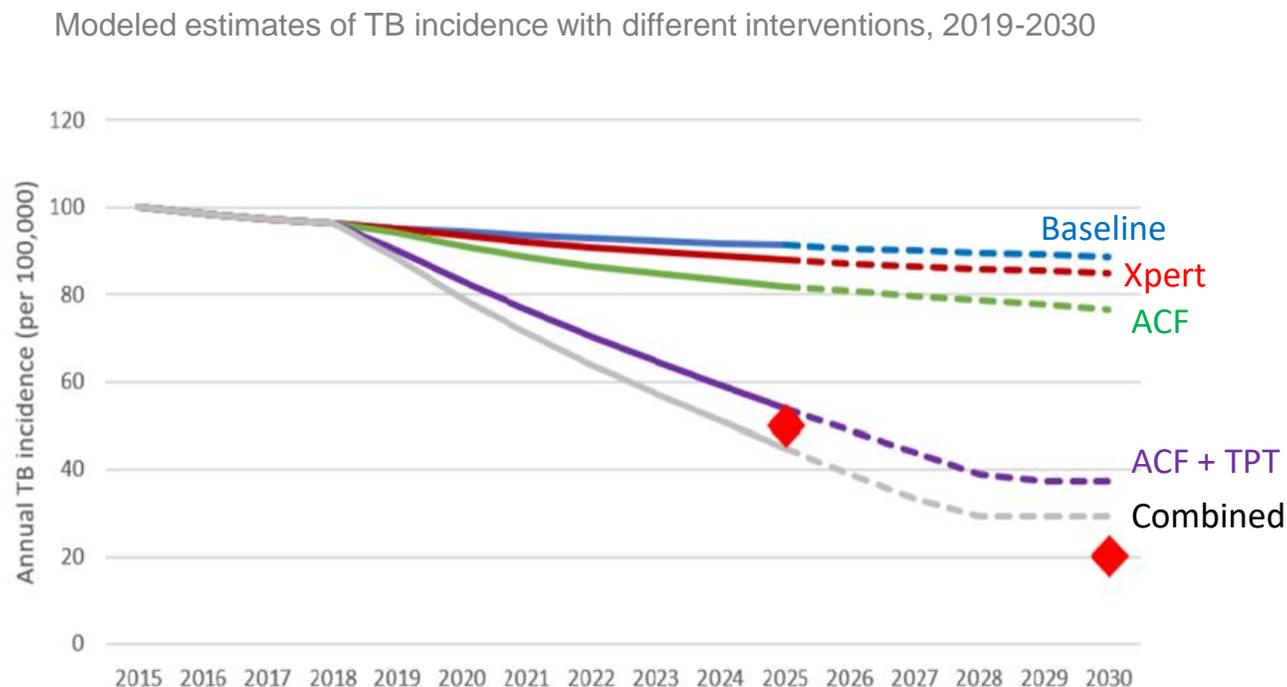

Disease specific programme approach

# Future scenario: Essential TB functions

# The 2030 vision requires a combination of tools

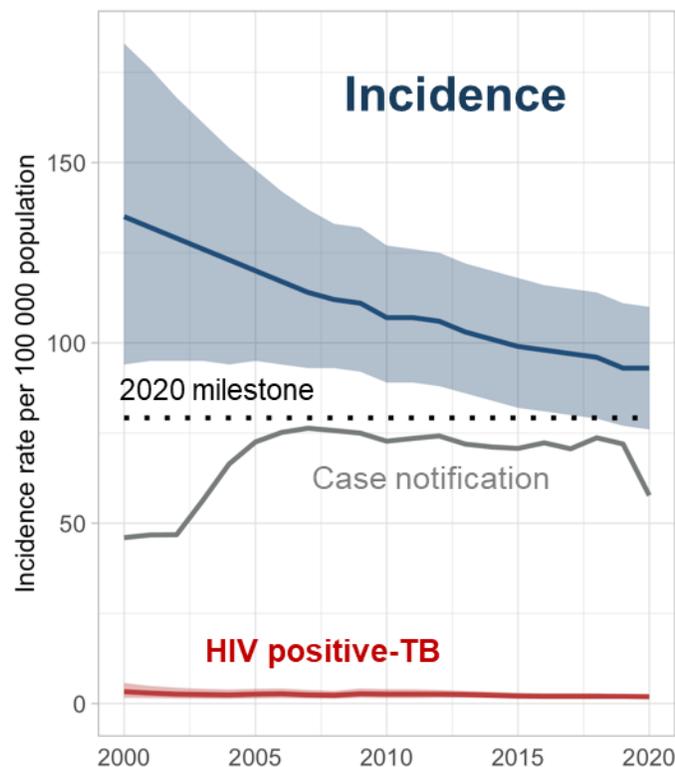

## Results of modelling;

- A slow decline in incidence (9%) is expected
- Optimal coverage of the current tools is needed to accelerate the progress
  - Systematic screening (ACF)
  - Xpert expansion
  - TB preventive therapy
- New tool(s) are necessary to reach the 2030 target
- Extremely profitable investment, providing at least a four-fold return on investments

# Prevailing challenges causing slow progress

**Incidence falling by just 1.5% per annum**

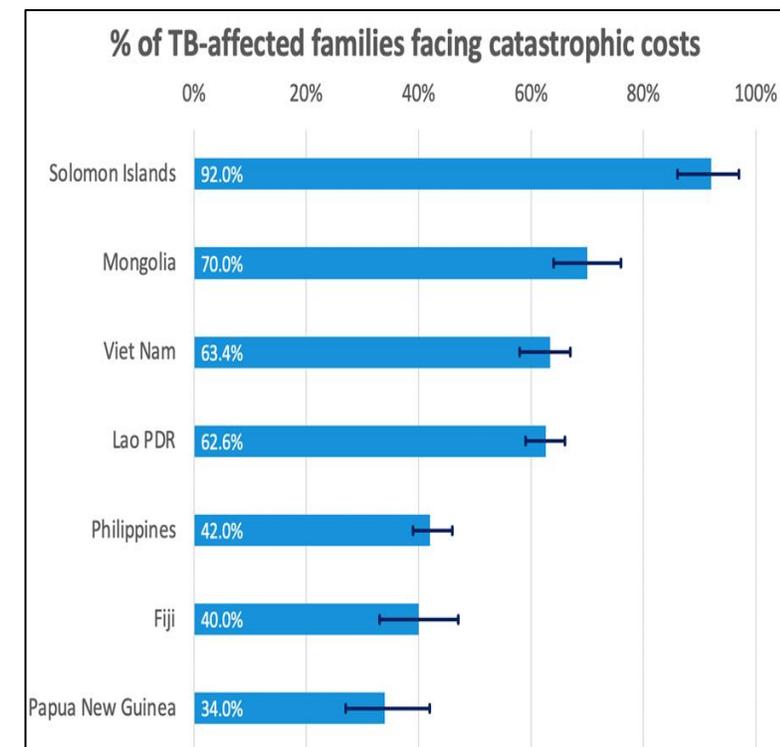

**Gaps in services**

**Missing TB cases (25%)**

**Slow roll-out of newer technologies/ guidelines**

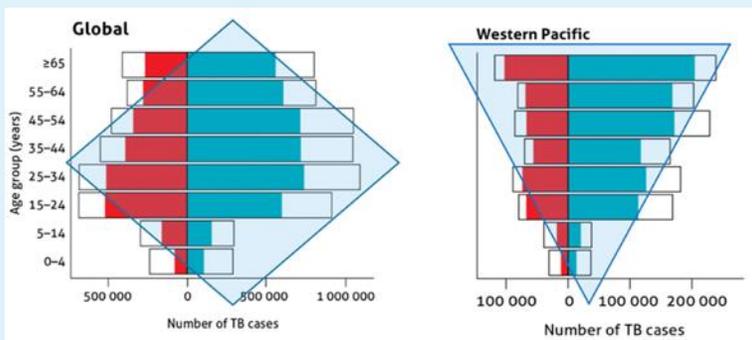

**Large pool of infected people, and TPT not adequately implemented**

**High catastrophic cost due to TB**

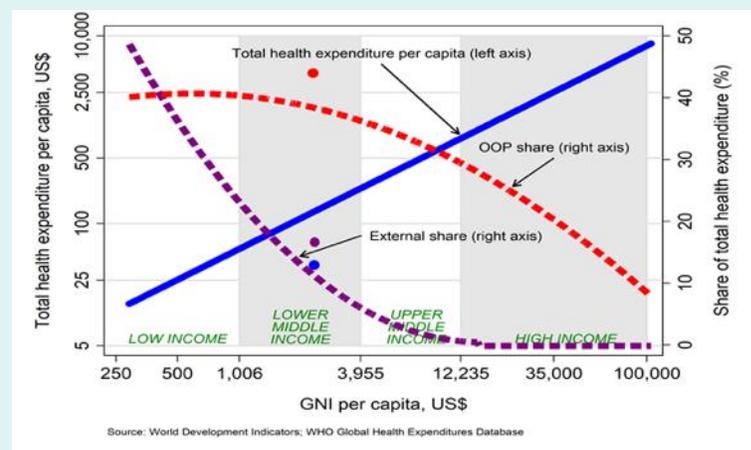

# Factors influencing future TB epidemic/response in WPR

## Demographic transition

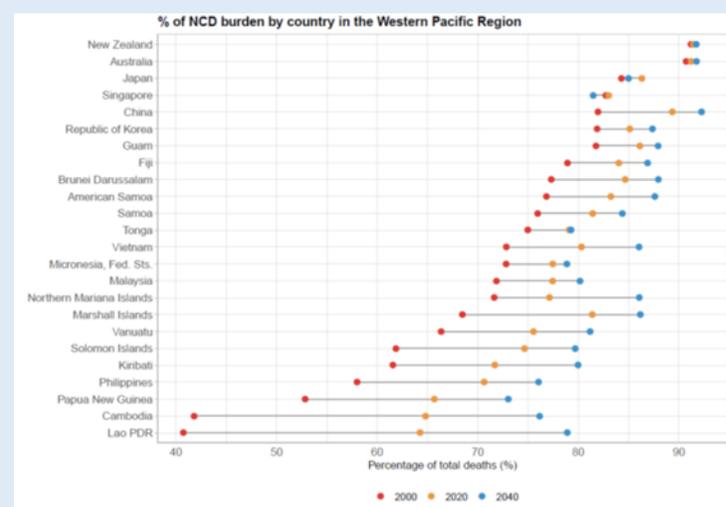

- Ageing society
- Reactivation of old infection will drive the epidemic
- Management of elderly TB

## Economic transition

- Rapid economic development
- Transition from donor to domestic funding
- Rapid urbanization

## Epidemiological transition

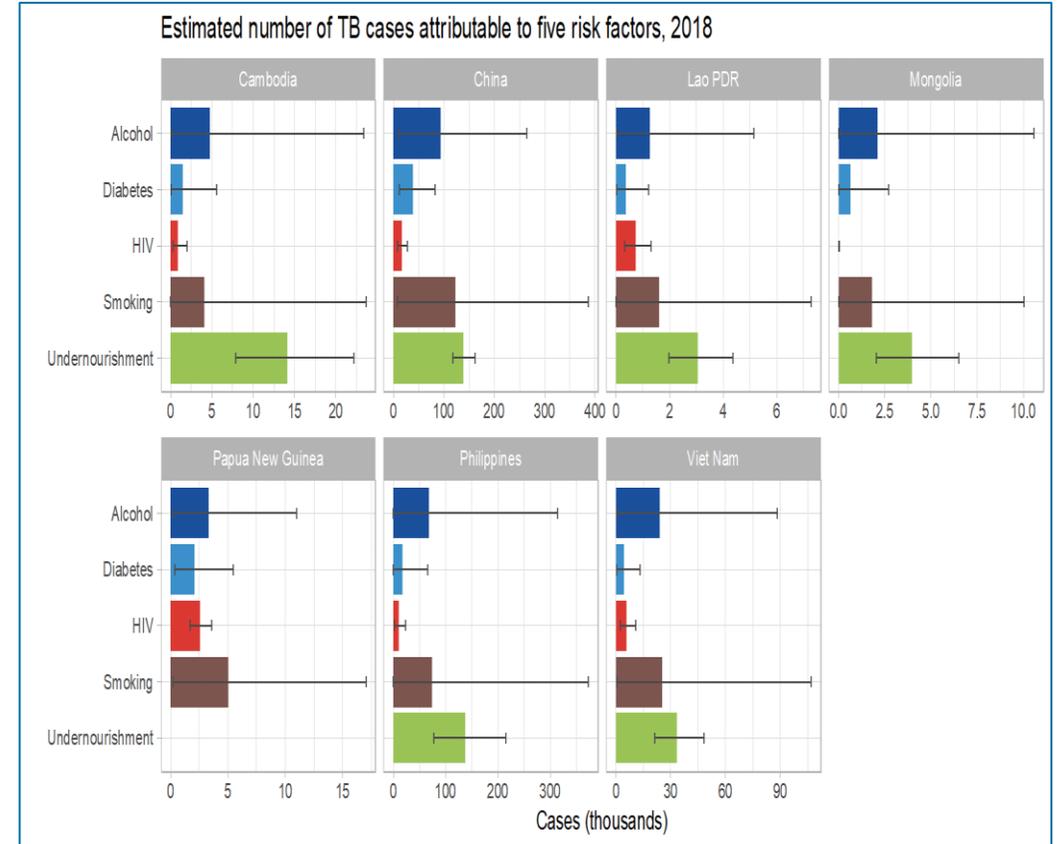

- Increased NCDs
- Management of co-morbidities

# Key drivers of TB

Interconnectedness

| Risk factor          | Population attributable fraction (%) | Attributable burden of TB (millions) |
|----------------------|--------------------------------------|--------------------------------------|
| Alcohol use disorder | 8.1                                  | 0.74                                 |
| Diabetes             | 3.1                                  | 0.37                                 |
| HIV infection        | 7.6                                  | 0.74                                 |
| Smoking              | 7.1                                  | 0.73                                 |
| Undernutrition       | 19                                   | 1.9                                  |

# In short, we have four layers of challenges

1. Challenges within TB area
2. Weakness within health system
3. Limited work on risk factors
4. Overarching related to governance

# The Response Framework toward 2030

## Vision and Goal

- **Vision:** TB free, the healthiest and safest Region.
- **Goal:** In line with the WHA approved End TB Strategy goals
  - Reduce the number TB **deaths by 90%** by 2030,
  - Reduce the rate of TB **incidence by 80%** by 2030; and
  - **Zero TB affected-families facing catastrophic cost** due to TB.

|  | 2015 baseline         | 2020 progress                           | 2020 milestones                          | 2025 milestones                   | 2030 targets                      |
|--|-----------------------|---|--|-----------------------------------|-----------------------------------|
| Reduction in <b>number of TB deaths</b>                    | 107 000               | 93 000<br>(13% reduction)               | 69 550<br>(35% reduction)                | 26 750<br>(75% reduction)         | 10 700 (90% reduction)            |
| Reduction in TB <b>incidence rates</b>                     | 99/100 000 population | 93/100 000 population<br>(6% reduction) | 79/100 000 population<br>(20% reduction) | 50/100 000 pop<br>(50% reduction) | 20/100 000 pop<br>(80% reduction) |
| % of TB-affected families facing <b>catastrophic costs</b> | Was not available     | 35–92%                                  | 0%                                       | 0%                                | 0%                                |

# Priorities and Approaches

|               |  |
|---------------|--|
| Principles    | Social Justice   Ethics   Human Rights   |
| Approach      | Country Focus   Multi-sectoral approach  |
| Action Domain | <ol style="list-style-type: none"><li>1. Strengthen Essential TB Functions (within TB)</li><li>2. Build Health system foundations (within Health)</li><li>3. Promote Health beyond Health (beyond Health)</li><li>4. Coordination and accountability (Overarching)</li></ol> |

|  |
|--|
| Operational modalities   |
| <ol style="list-style-type: none"><li>1. System approach to strengthen service delivery</li><li>2. Information for action</li><li>3. Strategic communication and change management</li><li>4. Innovations and rapid uptake</li></ol> |

# Proposed Responses by Action Domain as per country context

|                                     |   | Specific activities per response | Considerations |      |
|-------------------------------------|---|----------------------------------|----------------|------|
|                                     |   |                                  | HBCs           | LICs |
| Essentials<br>TB functions          | 1. Ensure early diagnosis and notification  |                                  |                |      |
|                                     | 2. Ensure people-centered care services   |                                  |                |      |
|                                     | 3. Prevent TB infection and diseases  |                                  |                |      |
|                                     |   |                                  |                |      |
| Health system<br>Foundations        | 1. Contribute to universal health coverage  |                                  |                |      |
|                                     | 2. Enhance collaboration for managing risk factors and co-morbidities               |                                  |                |      |
|                                     | 3. Establish/strengthen national level research networks                            |                                  |                |      |
|                                     | 4. Establish networks of community and civil society                                |                                  |                |      |
| Health<br>beyond<br>Health          | 1. Contribute to enhancing social protection mechanism                              |                                  |                |      |
|                                     | 2. Promote whole-of-government and whole-of-society approach                        |                                  |                |      |
| Governance<br>and<br>accountability | 1. Establish and sustain proper financing mechanisms                                |                                  |                |      |
|                                     | 2. Manage translation of policy to practice   |                                  |                |      |
|                                     | 3. Develop coordination mechanism and implement the accountability framework for TB |                                  |                |      |
|                                     | 4. Manage TB care in emergency situations   |                                  |                |      |

# Summary

TB is a continuing pandemic; incidence reducing slowly

COVID-like events may further hinder progress

Need actions in all four domains (TB, within health, beyond health and overarching)

Time to act now
